Badmus Samad Adewolu

Ibadan, Nigeria | badmussamad13@gmail.com | github.com/Samd43366

PROFILE

Backend Developer with a focus on system architecture and hands-on experience designing and building scalable, production-grade APIs in Python and FastAPI. Skilled in JWT authentication, third-party API integration, and clean, multi-tenant system architecture. Experienced in building Retrieval-Augmented Generation (RAG) systems, from document ingestion and embedding pipelines to vector search with Qdrant and pgvector, backed by PostgreSQL and MongoDB. Comfortable working across Groq, OpenAI, and Hugging Face for LLM and embedding integration, with Docker for containerized deployment. Passionate about designing systems that are reliable, well-structured, and built to scale.

EXPERIENCE

Software Development Intern, Vergold Technologies

April 2025 – August 2025

- Assisted in the development of backend APIs using FastAPI and Flask.
- Contributed to internal tools and scripts in Python.
- Collaborated with a small tech team in an agile environment.
- Participated in code reviews to improve codebase quality.

PROJECTS

Amok AI — Multi-Tenant AI Platform

- Built backend systems including PostgreSQL schema design, cost/margin modeling, and tiered pricing logic for a multi-tenant platform.
- Implemented a RAG pipeline with Qdrant for vector search, delivering context-grounded responses while keeping tenant data isolated.
- Researched and identified a low-cost RAG-based architecture for deploying the platform as an affordable customer care AI system, making it viable for small businesses with limited budgets.

Jarvis — AI Assistant Backend

- Developed backend services for an AI assistant, handling request routing, session logic, and LLM integration.
- Built a RAG pipeline on Qdrant for semantic search and document-grounded answers.

Bowen AI — Academic RAG Assistant

- Built a student-facing AI assistant (FastAPI) giving students natural-language access to course materials via a hybrid RAG pipeline (Qdrant + Gemini) with citation support.
- Added JWT auth, role-based access control, and scheduled background jobs for automated knowledge syncing.

School Management API (FastAPI + MongoDB)

- Built a RESTful API with user authentication, role-based access, and full CRUD operations for students, teachers, and classes.

SKILLS

Language: Python (1+ years)

Web: HTML, CSS, JavaScript; certificate for web development from GNT Africa (2023)

Frameworks: FastAPI

Tools & technologies: Git & GitHub, JWT authentication, API integration, RAG, Groq, OpenAI, Hugging Face, Docker, SQLAlchemy

Databases: PostgreSQL, Qdrant, pgvector, MongoDB, SQLite

Soft skills: System architecture, problem-solving, communication, teamwork, quick learner

EDUCATION

BSc Computer Science (in progress), 200 level, Bowen University

High School Diploma (WAEC certificate), 2023, Orita-Mefa Baptist Model School
